

Artificial Intelligence Threat Detection, Ethical Egoism, and Society

Research Report Outline

Person 1

Introduction

- Introduce AI threat detection
- Explain how AI is used for cyber security threats and is able to protect data/assets
- Introduce Ethical Egoism - protecting the interest of yourself a company or country could affect others.
- Thesis statement

AI threat detection

- Define
- Explain how it works
- Examples
- AI vs. traditional detection
- Explain why organization use it

Person 2

Benefits and the importance of AI threat detection

- Protecting sensitive information
- Faster threat detect
- Helps prioritize real threats and reduce investigation time
- Prevents data loss
- Protects companies/government overall
- Include evidence supporting evidence

Person 3

Problems and Risk

- Dependency of AI
- Cybersecurity conflicts between countries
- Privacy
- False positives
- AI being used maliciously

Ethical Egoism

- Define
- How does it act to ones self interest
- Harmful actions when it only benefits the agent (ottosen)
- Ethical egoism defended as a normative ethical theory (Burgess Jackson)
- Explain how sometimes self interest could benefit society.

Person 4

Connection of both

- Self interest of using AI by (government or company)
- Ethical egoism - could be excused prioritizing protection
- What happens to when you put yourself first but harm another(company/country)
- Use an example (united states) how we benefit from using AI/cybersecurity for our nation interest
- If everyone would act out on self interest would this increase international conflict?
- Should there be limits of protecting one's own interest?
- Connect back to ethical egoism paragraph

Conclusion

- Why is AI threat useful
- Restate the connection between ai threat and ethical egoism
- Explain that while using AI threat detection to protect your own interest it might not necessarily be wrong as it does exist to protect organizations.
- However, protecting your own interest doesn't necessarily justify every action.
- Explain Why is it important to balance both interest and security while thinking of the consequences of others?
